EDUCATION

B.Tech in Computer Science Engineering — Jain University, Bengaluru

Bengaluru, India | 2023 – 2027

GPA: 9.05/10.0 | Coursework: Data Structures, DBMS, Operating Systems, Computer Networks

EXPERIENCE

Full Stack Developer Intern — TheBazerMela

Bengaluru, India | Apr – Jun 2026

- Developed and maintained B2B and B2C e-commerce platforms using NestJS and Next.js, delivering scalable, high-performance web applications for real business clients.
- Designed RESTful APIs, JWT-based authentication systems, and role-based access controls; integrated Razorpay, push notifications, and third-party vendor APIs.
- Worked in an agile team — sprint planning, code reviews, and standups to ship features on time and resolve production issues quickly.

Backend Developer — Hyperce

Nepal | Dec 2025 – Feb 2026

- Built and maintained backend services within a vendor framework, ensuring reliable data exchange, interoperability, and secure API integration with third-party systems.
- Implemented authentication and authorization modules with fine-grained access control; partnered with frontend and product teams to ship features on schedule.

PROJECTS

AuthKit — Self-Hosted Auth Platform (Clerk Alternative)

[GitHub](#) | [Live](#)

- Built a production-grade multi-tenant self-hosted auth platform — developers create apps, manage users, view audit logs, configure social login, and rotate API keys via a Next.js 15 App Router dashboard.
- Backend (Node.js/Express + Prisma + PostgreSQL/Neon): JWT, bcrypt, refresh token rotation, MFA/TOTP, OAuth (Google/GitHub), email OTP via Resend, rate limiting, webhooks, and per-app policy config.
- Published npm SDK @paribeshn/authkit — React hooks, prebuilt SignIn/SignUp/ForgotPassword components, Next.js middleware helper, auto-detection of OAuth providers. Backend on Railway, frontend on Vercel.

Stack: TypeScript, Node.js, Express, Prisma, PostgreSQL, JWT, TOTP/MFA, bcrypt, Resend, Next.js 15, Tailwind v4, shadcn/ui

MailAI — AI-Powered Email Client

[GitHub](#) | [Live](#)

- AI email client built on Gmail — Claude triages emails into priority buckets, drafts context-aware replies matching user tone, and schedules smart follow-ups to reduce inbox time.
- Gmail API + Better Auth OAuth 2.0 for secure access; PostgreSQL/Prisma for persistent thread, label, and user preference storage.

Stack: Next.js 16, Claude AI, Gmail API, Better Auth, PostgreSQL, Prisma, shadcn/ui, Vercel

OPEN SOURCE CONTRIBUTIONS

Merged PRs in production OSS — [Job Board](#) (code100x), [Formbricks](#), [Twenty CRM](#) — bug fixes, new features, and UI improvements across TypeScript/Next.js codebases.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL

Frontend: Next.js, React, Vite, Tailwind CSS, shadcn/ui

Backend: Node.js, Express.js, NestJS

Auth & Security: JWT, bcrypt, TOTP/MFA, OAuth 2.0, Better Auth, Clerk, Auth.js

Database & ORM: PostgreSQL, Prisma ORM, MongoDB, Redis, Neon

DevOps: Docker, CI/CD Pipelines, Railway, Vercel

AI / APIs: Claude AI, Groq, Vercel AI SDK, Gmail API, Resend, Socket.io
